Challenge: **Health & Wellness App**

Build a consumer health & wellness app

Build something people would want to use. Surprise us.

THE PROBLEM

Use Codex, Claude, or a similar coding agent to build a consumer-facing health and wellness web app. The brief is deliberately open-ended: choose the problem, the audience, and the experience. A tracker, an AI coach, or a way to find people to play a sport are only starting points. Bring your own idea.

YOUR TASK

Choose an idea and build a working app. Show your taste, creativity, and attention to detail through an experience that is useful and enjoyable for the person using it.

Answer format: A working app link and a short explanation of what you built.

RULES OF THE GAME

- Use Codex, Claude, or a similar coding agent. You may use AI to research, design, write code, test, and debug.
- Make the main experience easy to try. A concept, slide deck, or mock-up alone is not a working app.
- Submit your own work. Be ready to explain the problem you chose, your decisions, and how AI helped you.

WHAT TO SUBMIT

- A working link to your app
- A short description of who it is for, what it does, and what makes it interesting
- Optional: source code, demo video, and AI tools used

Submit Your Build

Submit your working app link by 3rd October, 15:00 (3 PM).
